1 Introduction

1.1 Purpose

This manual explains how to use Veritas Lab, the DeltaTech media-verification platform built in partnership with Naked Insurance. It walks through every page of the application in the order you are likely to meet it, and explains what each button does, who is allowed to use it and what to expect when you do.

It is written for the people who use the platform day to day that is, claimants and staff who submit media (USER accounts), the investigators who analyse it (INVESTIGATOR accounts) and the administrators who manage the platform (ADMIN accounts). No technical knowledge is assumed.

1.2 Scope

The manual covers the web application as it currently stands: signing up and signing in, the Dashboard, the case lifecycle (open, published, closed), evidence upload, the Case Board, the Workbench with its AI Report, Annotations, Metadata and Plug-and-Play Models tabs, comments, audit timelines, the Admin and Audit Logs pages, and the Help page.

It does not cover installing, deploying or maintaining the platform, the programming interface (API) behind it, or how the AI detection models were trained. Those topics are documented separately for the development team.

2 Welcome to Veritas Lab

Veritas Lab is a website that helps you work out whether a photo, a document or a video has been manipulated by AI.

People send around a lot of media that has been edited, faked or generated by a computer. Veritas Lab gives you a tidy, organised place to collect that material, runs automatic AI checks on it, lets you mark up the parts that look wrong and talk it through with your colleagues, all without ever changing the original file.

2.1 The core ideas

Everything in Veritas Lab is built around a few simple ideas that stack on top of each other:

- **Case:** a folder for one investigation. It has a title, a description, the person who created it, and a status of Open, In Progress (published) or Closed.
- **Evidence:** a file you upload into a case. Each piece of evidence gets its own workspace, called the Workbench.
- **AI Report:** as soon as a file is uploaded it is analysed automatically, and the result is summarised as a risk level with the reasons behind it.
- **Annotation:** a mark you place on a piece of evidence: a circle around a suspicious area, a note pinned to a spot, or a highlighted passage in a PDF.
- **Case Board:** a canvas where investigators lay out all the evidence in a case and connect the dots.

Note: Annotations are overlaid on the evidence and never alter the original file in any way.

2.2 Who the platform is for

Veritas Lab is used by insurance claimants and staff, claims investigators, journalists, legal teams and forensic analysts. What you can do depends on the role your organisation has given your account.

- **USER:** the baseline account. Can create their own cases, upload evidence to them, publish them for investigation and follow them through to the end. A USER sees the AI Report and annotations on their case once it has been closed.
- **INVESTIGATOR:** can also see every published and closed case, assign themselves to a published case, analyse its evidence, build its Case Board, run Plug-and-Play models and close it. Investigators see the summary cards on the Dashboard.
- **ADMIN:** everything an INVESTIGATOR can do, plus the Admin page for managing accounts and roles, the Audit Logs page, and the ability to delete any case or piece of evidence.

Action	USER	INVESTIGATOR	ADMIN
Create a case, upload evidence to it, publish it	Yes	Yes	Yes
See other people's published and closed cases	No	Yes	Yes
Assign yourself to a published case	No	Yes	Yes

Action	USER	INVESTIGATOR	ADMIN
See AI Reports and annotations	Own case, once closed	Yes	Yes
Annotate evidence, run Plug-and-Play models	No	When assigned	When assigned
View and edit the Case Board	No	View; edit when assigned	View; edit when assigned
Close a case	No	When assigned	When assigned
Comment on a case	Once closed	Yes	Yes
Delete a case	Own, while open	Own, while open	Any case
Manage users; view Audit Logs page	No	No	Yes

Table 3 - What each role can do

Note: The Dashboard, sidebar and other pages look and behave differently depending on your role. If a button described in this manual is missing, your role or the state of the case does not allow that action.

2.3 The life of a case

Every case moves through three states. Knowing which state a case is in explains most of what you can and cannot do with it.

State	Shown as	What happens
Open	Open	The case is a private draft. Only its creator can see it. The creator can upload and delete evidence, and edit the title and description.
Published	In Progress (Dashboard), Published (Case details)	The creator has handed the case over. Evidence is locked. Investigators and admins can see it, and one of them assigns themselves to it and carries out the analysis.
Closed	Closed	The assigned investigator has finished. The case is now read-only. Its creator can see the full AI Reports and annotations and join the discussion in Comments.

Table 4 - The three states of a case

1. A USER (or anyone) creates a case and uploads the media to be checked.
2. The creator clicks **Publish Case** when all the evidence is in.
3. An investigator finds the case on their Dashboard and clicks **Assign to me**.
4. The investigator reviews the AI Reports, annotates the evidence, checks metadata, builds the Case Board and records findings in Comments.
5. The investigator clicks **Close Case**. The creator can now read the results.

3 Moving through the app

Most work follows the same path:

1. **Landing page:** read what the platform does, then choose Sign Up or Log In.
2. **Create Account / Log In:** prove who you are. You end up on the Dashboard.
3. **Dashboard:** see your cases. Search, filter, open one, assign yourself to one, or create a new one.
4. **Case page:** see the evidence inside a case, upload more, publish or close it, or switch to the Comments, Audit Timeline or Case Board tabs.
5. **Workbench:** open one piece of evidence to read its AI Report, mark it up, inspect its metadata or run your own model on it.
6. **Back out again:** return to the case, then to the Dashboard, and pick up the next job.

3.1 The sidebar

Once you are signed in, a dark sidebar stays pinned to the left of every page. The item you are currently on is highlighted in green, so you always know where you are. From top to bottom it contains:

- **Collapse button** (arrow next to the Veritas Lab logo): shrinks the sidebar to icons only, giving you more room. Click the menu icon to expand it again.
- **Dashboard:** your list of cases.
- **Admin:** user management (administrators only).
- **Audit Logs:** the platform-wide audit record (administrators only).
- **Help:** tutorials, guides and frequently asked questions.
- **Current Case:** appears only while you are inside a case. It gives one-click access to that case's four tabs:
 - Evidence
 - Comments
 - Audit Timeline
 - Case Board
- **Settings** (near the bottom): opens the Change password window
- **Log Out** (at the very bottom): ends your session and returns you to the login screen.

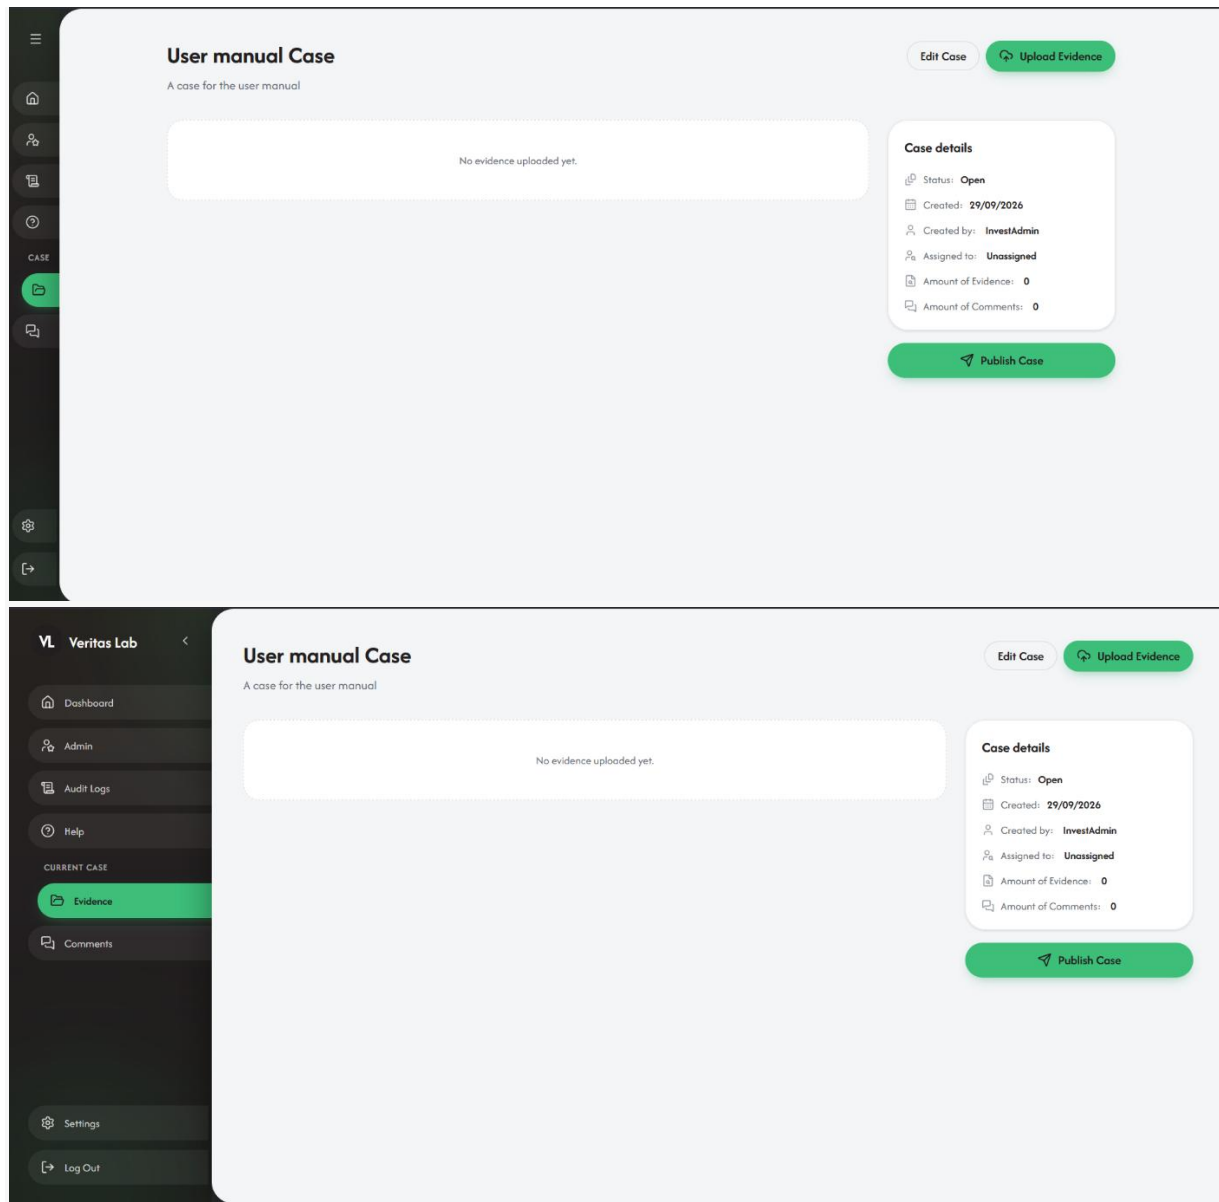

Figure 1 - The sidebar in its expanded and collapsed states

3.2 Staying signed in

While you are actively using the site (moving the mouse, typing, scrolling or clicking), Veritas Lab quietly renews your session in the background, at most once every five minutes. Your session also renews when you come back to the browser tab.

If you leave the site idle for longer than your organisation's session length, your session expires. The next time you try to open a protected page you are taken to the login screen; simply sign in again.

4 The Landing page

Address: /landing

4.1 What you see

An introduction to the site with two buttons, which also appear in the navigation bar at the top of the page:

- **Sign Up:** takes you to the account creation page.
- **Log In:** takes you to the sign-in page.

Scroll down and the page continues with three more

- **Highlighted features:** AI-powered analysis, content review, tamper detection and deepfake detection.
- **How it works:** the four-step workflow: open a case, upload evidence, run the analysis, review and rule.
- **Who it's for:** claims investigators, journalists and fact-checkers, legal and compliance teams, and forensic analysts.

A footer at the very bottom closes the page off.

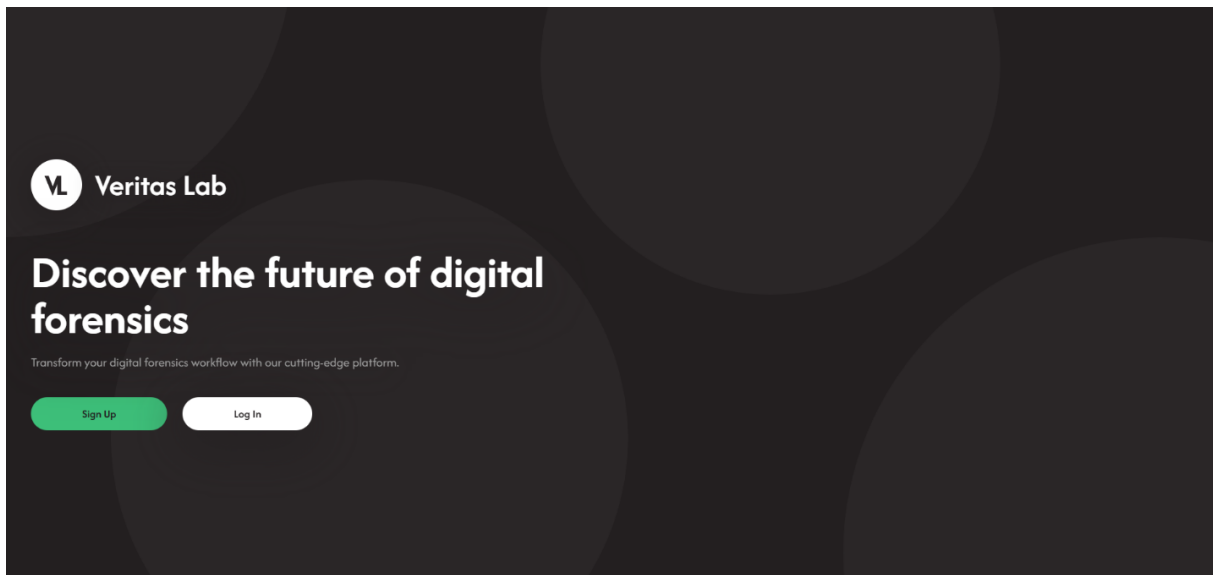

Figure 2 - The landing page, with the Sign Up and Log In buttons

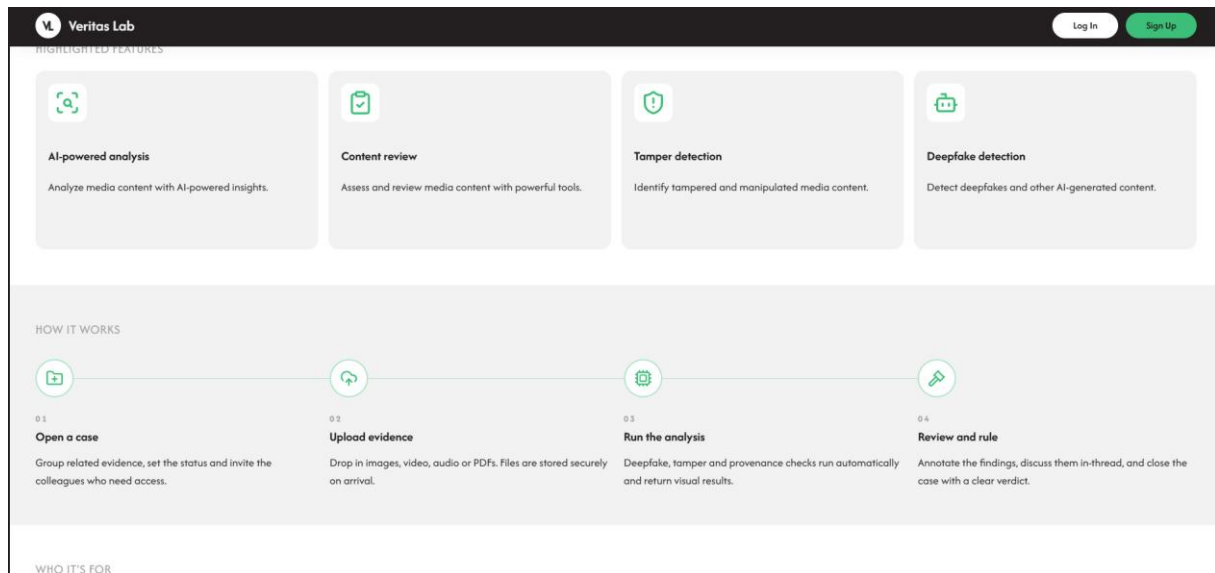

Figure 3 - The highlighted features and How it works sections further down the landing page

4.2 What to do here

1. If you have never used Veritas Lab, click **Sign Up**.
2. If you already have an account, click **Log In**.

If you are already signed in, opening the landing page takes you straight to your Dashboard.

5 Creating an account

Address: /register

The screen is split in two: the form on the left and a dark Veritas Lab panel on the right. On a narrow screen or a phone, only the form is shown.

5.1 Filling in the form

1. Enter a **Username**. This is the name other people see on your cases and comments.
2. Enter your **Work Email**. You use this to sign in.
3. Choose a **Password** and type it again in **Confirm Password**. If the two do not match, "Passwords don't match." appears straight away.
4. Click **Create Account**. The button reads "Creating Account..." while it works.
5. If something is wrong, a red message explains what to fix. If it worked, a green confirmation appears and you are taken on to sign in.

PASSWORD RULES

Passwords must be at least 12 characters long and include at least one upper-case letter, one lower-case letter, one number and one special character (for example !, @ or #).

Every new account starts with the USER role. An administrator can change your role later.

If you realise you already have an account, use the **Sign In** button below the form instead.

The screenshot shows the 'Create your account' interface. On the left, there is a white form with the following fields: 'Username' (containing 'adamgoblee'), 'Work Email' (containing 'adamgoblet@gmail.com'), 'Password' (masked with dots), and 'Confirm Password' (masked with dots). Below these fields is a prominent green 'Create Account' button. Underneath the button is a small 'or' separator and a 'Sign In' button. The right side of the screen features a dark background with the 'Veritas Lab' logo in white and the tagline 'Upload, analyze and review evidence with ease.' at the bottom.

Figure 4 - The Create your account screen

Create your account

Get started with Veritas Lab.

Username

Work Email

Password

Confirm Password

Password must be atleast 12 characters, have an upper and lower case character and a special character

Create Account

or

Sign In

Figure 5 - The warning shown when something has been filled in incorrectly

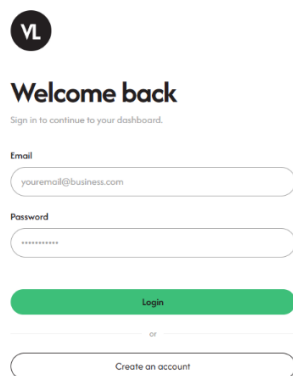

6 Logging in

Address: /login

This screen looks like the registration screen, with the form on the left and the dark panel on the right, but it only asks for two things.

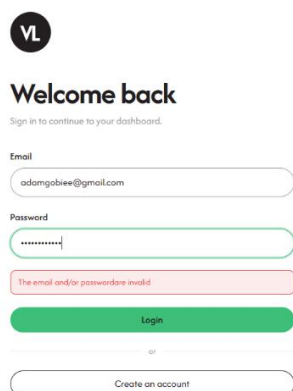

1. Enter the **Email** address you registered with.
2. Enter your **Password**.
3. Click **Login**.
4. If the details are wrong, a red message explains the problem. If they are right, you are taken to the Dashboard.

Do not have an account yet? Use the **Create an account** button below the divider.

The screenshot shows the Veritas Lab login interface. On the left, there is a white form area with a dark green header containing the 'VL' logo. Below the logo, the text 'Welcome back' is displayed, followed by a smaller line 'Sign in to continue to your dashboard.' The form contains two input fields: 'Email' with the placeholder 'youremail@business.com' and 'Password' with masked characters. Below these fields is a green 'Login' button. Underneath the button is a small 'or' separator and a 'Create an account' button. On the right, there is a dark green panel with the 'Veritas Lab' logo at the top and the tagline 'Upload, analyze and review evidence with ease.' at the bottom.

Figure 6 - The Welcome back login screen

This screenshot shows the same login interface as Figure 6, but with an error message. The 'Email' field now contains 'adamgoblee@gmail.com' and the 'Password' field is filled with masked characters. A red error message box appears below the password field, stating 'The email and/or password are invalid'. The 'Login' button remains green, and the 'Create an account' button is still visible below it. The dark green panel on the right with the 'Veritas Lab' logo and tagline is also present.

Figure 7 - The message shown when sign-in details are not accepted

7 Changing your password

Sidebar: Settings

You can change your password at any time from any page.

1. Click **Settings** near the bottom of the sidebar. A window titled "Change password" opens.
2. Enter your **Current Password**.
3. Enter a **New Password** and repeat it in **Confirm New Password**. The same rules apply as when you registered, and the new password must be different from the current one.
4. Click **Save Password**. The button reads "Saving..." while it works.
5. A green message confirms the change and the window closes by itself a moment later. If something is wrong, a red message explains what to fix.

Click **Cancel** to close the window without changing anything.

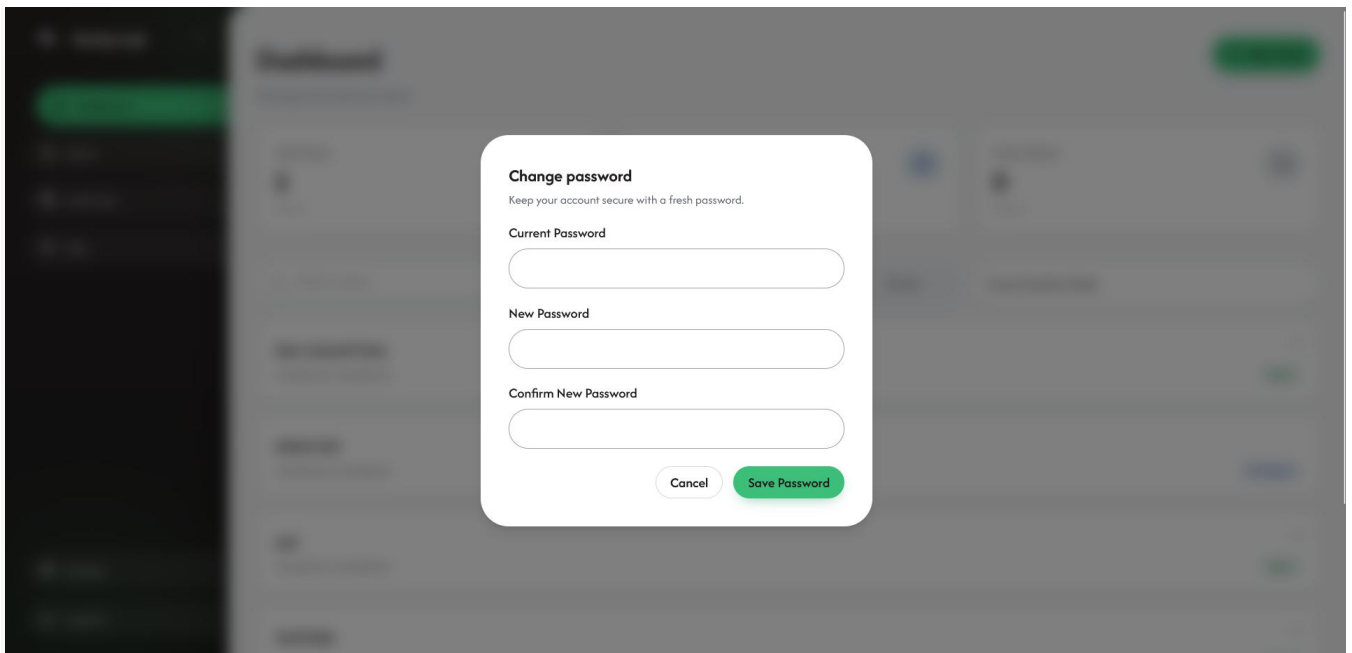

Figure 8 - Changing your password

8 The Dashboard

Address: /dashboard **Sidebar:** Dashboard

This is the main page and where you land after logging in. Which cases appear depends on your role:

- A **USER** sees only the cases they created.
- An **INVESTIGATOR** or **ADMIN** sees the cases they created plus every published and closed case on the platform. Other people's open (draft) cases stay private.

8.1 The summary cards

Investigators and admins see three cards across the top, each counting the cases visible to you:

- **Total Cases:** how many cases there are in total ("All time").
- **Open Cases:** how many have not been closed yet. This includes both open and in-progress cases.
- **Cases Closed:** how many have been finished.

These numbers update on their own as cases are created and closed. USER accounts do not see these cards.

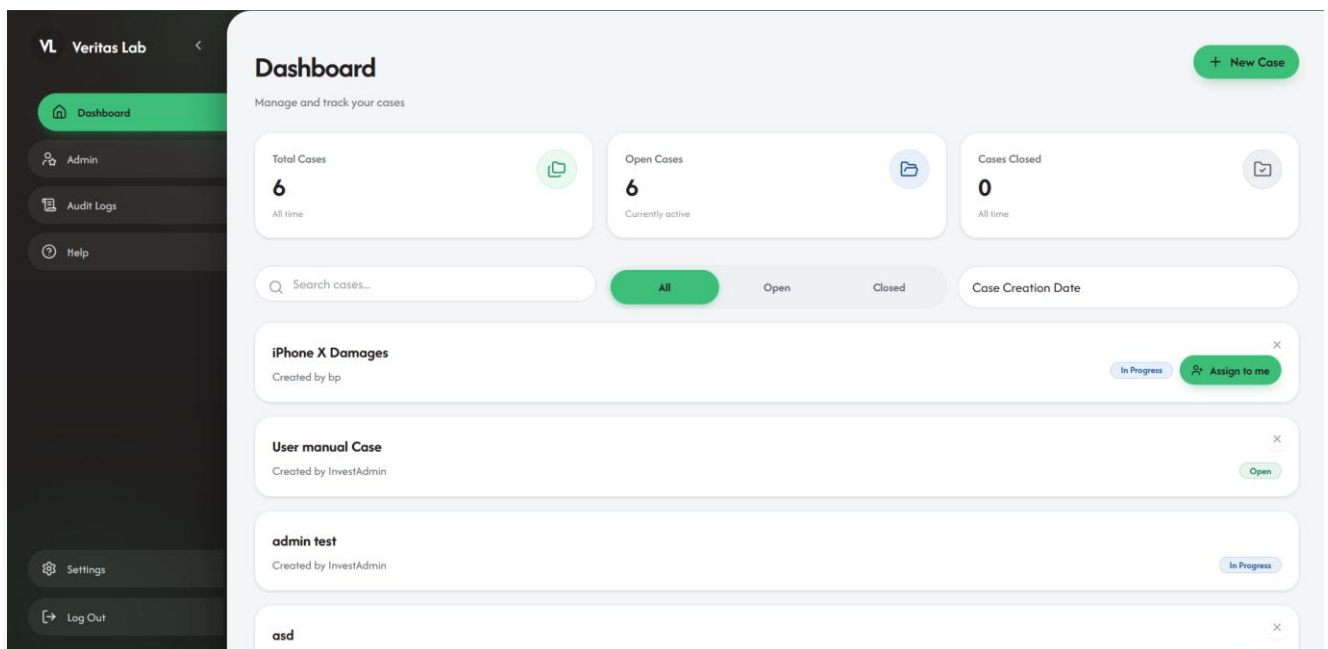

Figure 9 - The Dashboard as an Investigator sees it

8.2 Finding a case

Below the cards is a row with three controls, left to right:

- **Search cases:** type any part of a case name, the case ID, or the name of the person who created it. The list filters as you type.
- **All / Open / Closed slider:** click a segment to show only cases with that status. "Open" includes cases that are In Progress. "All" shows everything.

- **Sort dropdown:** choose the order of the list: Case Creation Date (newest first, the default), Case Name (A to Z) or Case Creator (A to Z).

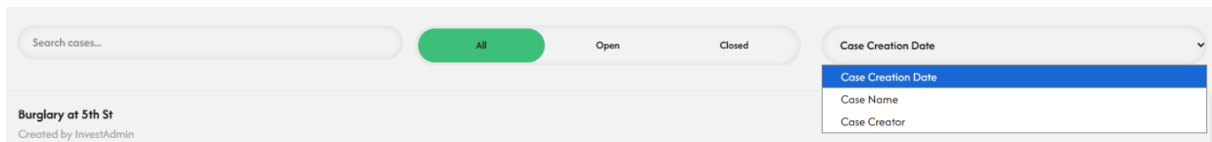

Figure 10 - The controls used to search, filter and sort your cases

8.3 The case list

Underneath, every case appears as a wide card. Click anywhere on a card to open that case. Each card shows:

- The case **title** and who created it.
- A **status badge**: Open, In Progress (published and being investigated) or Closed.
- An **Average risk score**, once at least one piece of evidence in the case has an AI Report you are allowed to see. It is the average of the evidence risk levels, shown as a number and a label such as "2.0 | Medium Risk" (see 11.3 for what the levels mean).

Some cards also carry small buttons in the top-right corner:

- **Assign to me** (investigators and admins): appears on a published case that nobody has taken yet and that you did not create yourself.
- **Unassign** (investigators and admins): appears on a published case that is assigned to you, if you want to hand it back.
- **X** (delete): removes the case.

8.4 Creating a new case

Every signed-in user has a green **New Case** button at the top right of the Dashboard.

1. Click **New Case**. A window titled "Create new case" opens over the page.
2. Enter a **Case Title**: a short name such as "Claim 4471 - vehicle photos".
3. Enter a **Case Description**: a sentence or two explaining what is being investigated. Both fields are required.
4. Click **Create Case**. The button briefly reads "Creating...".
5. The window closes and your new case appears in the list straight away with the status Open. If you change your mind, click **Cancel**.

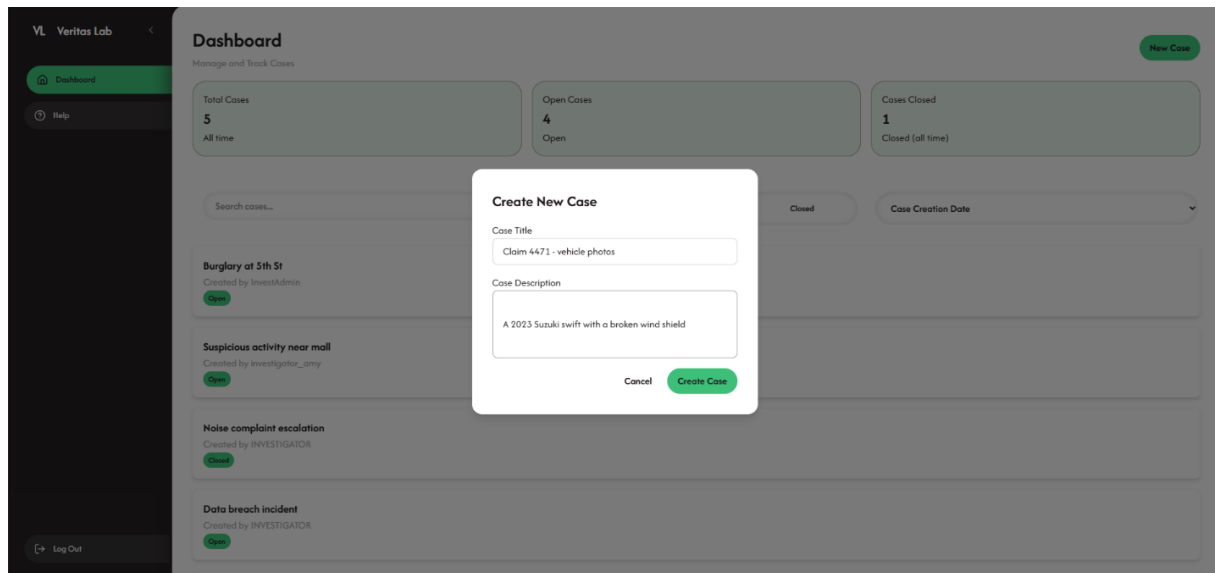

Figure 11 - Creating a new case

9 The Case page

Address: /case-page/<case id> **How to get here:** click any case card on the Dashboard

This page shows everything belonging to one investigation. The case name is the large heading, with its description underneath.

9.1 The page at a glance

- **Edit Case** and **Upload Evidence** buttons at the top right, when you are allowed to use them.
- A **slider with four tabs**: Evidence, Comments, Audit Timeline and Case Board. The same four tabs appear under Current Case in the sidebar.
- A **Case details** panel on the right showing the Status (Open, Published or Closed) and the date it was Created (day/month/year).
- Underneath the Case details panel, the **Publish Case** or **Close Case** button when that action is available to you.

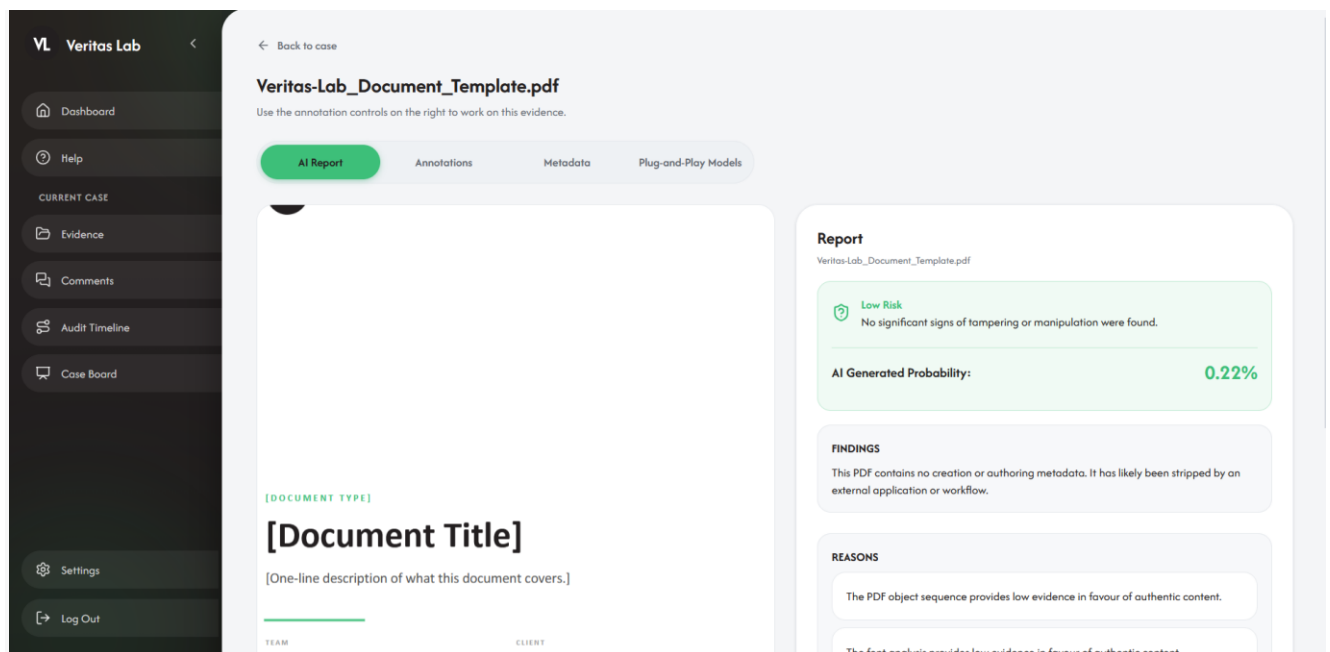

Figure 12 - A case page showing its uploaded evidence

9.2 Editing the title and description

The person who created a case can change its title and description until the case is closed.

1. Click **Edit Case**. A window titled "Edit case" opens with the current title and description filled in.
2. Change either field.
3. Click **Save Changes**. The page refreshes with the new details. Click **Cancel** to leave everything as it was.

Renaming a case or changing its description is recorded in the case's Audit Timeline.

9.3 The Evidence tab

This is the tab you see when the page first opens. Each piece of evidence appears as a card showing its file name, a small preview of the image or the first page of the PDF, and the file type. Videos and other files show "No preview" instead of a thumbnail.

- Click a card to open that file in the **Workbench**.
- Click the small **report icon** in the bottom-right corner of a card to read that file's AI Report in a pop-up window without leaving the case.
- Click the small **X** in the top-right corner to delete the evidence. It appears for the case creator while the case is open, and for admins at any time. A confirmation window names the file; click **Delete** to remove it permanently or **Cancel** to keep it.

If nothing has been uploaded yet, the tab shows "No evidence uploaded yet."

9.4 Uploading evidence

The creator of a case sees an **Upload Evidence** button at the top right of the case page while the case is still open. Nobody else can add evidence to a case, and nobody can add evidence once it has been published.

1. Click **Upload Evidence**. A window titled "Upload media" opens.
2. Click the large box in the middle (it reads "Click to browse") and pick a file from your computer.
3. Once chosen, the box shows the name of your file so you can check it is the right one. Click the box again to choose a different file.
4. Click **Upload Media**. The window closes and the new item appears among the evidence cards.
5. Click **Cancel** if you change your mind.

As soon as a file is uploaded it is stored securely and queued for automatic AI analysis. The AI Report appears in the Workbench once the analysis has finished.

Rule	Detail
Supported file types	PNG, JPG and JPEG images; PDF documents; MP4 videos.
Maximum size	50 MB per file.
PDF safety	PDFs that contain embedded scripts are rejected: "We don't allow scripts in pdfs. They are a security concern."
Unsupported types	Any other file type is rejected with the message "Unsupported file extension" followed by the extension.
Duplicates	If exactly the same file has been uploaded before, Veritas Lab reuses the stored copy instead of storing it twice. It still appears in your case as normal.

Table 5 - Evidence that can be uploaded

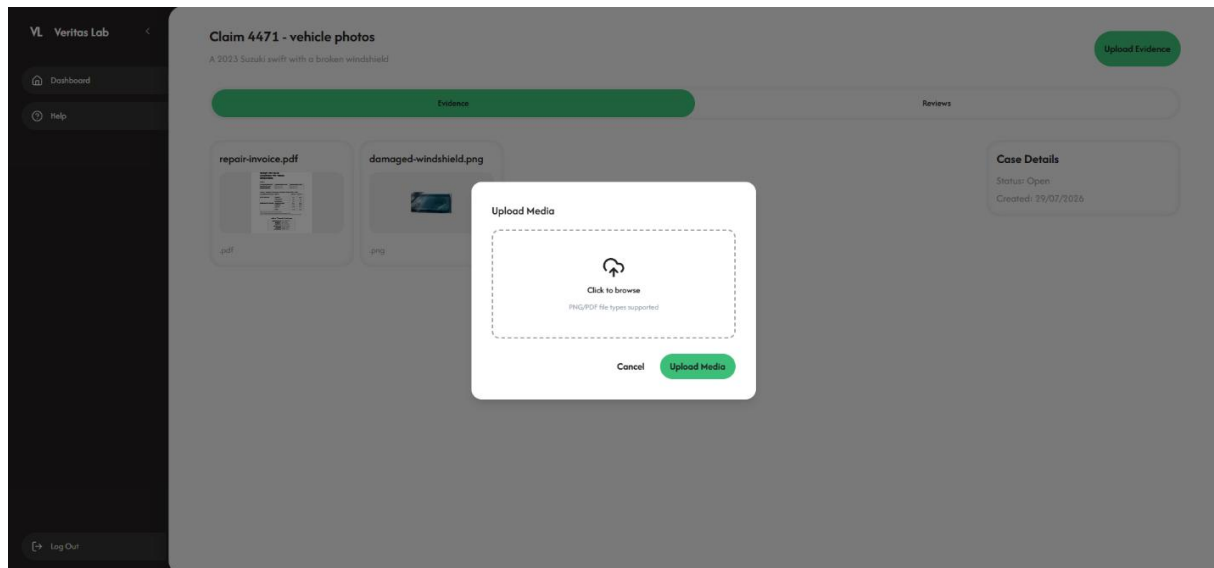

Figure 13 - Uploading a new piece of evidence

9.5 Publishing a case

While a case is open it is a private draft that only you can see. When all the evidence is in, publish it so that an investigator can pick it up.

1. Open your case. The green **Publish Case** button sits under the Case details panel.
2. Click it. A window asks "Publish case?" and reminds you that publishing makes the case visible to investigators and admins, and that you will no longer be able to add or remove evidence.
3. Click **Publish** to confirm, or **Cancel** to keep working on the draft.
4. The Case details panel now shows the status Published, and the Dashboard shows the case as In Progress.

Note: Publishing cannot be undone. Check that every file you want investigated has been uploaded first.

9.6 Assigning yourself to a case

Investigators and admins take on a published case by assigning themselves to it. Only one person can be assigned at a time, and you cannot assign yourself to a case you created.

1. On the Dashboard, find a published (In Progress) case with an **Assign to me** button on its card.
2. Click **Assign to me**. A window asks "Assign this case to you?".
3. Click **Assign**. The button on the card changes to **Unassign**.

To hand a case back, click **Unassign** on its card and confirm. The case becomes available for another investigator to pick up. Being assigned is what lets you annotate the evidence, save the Case Board, save Plug-and-Play results and close the case.

9.7 Closing a case

When the investigation is finished, the assigned investigator closes the case. Only the investigator or admin assigned to a published case can close it, and not if they created the case themselves.

1. Open the case. The **Close Case** button sits under the Case details panel.

2. Click **Close Case**. The button reads "Closing" while it works.
3. The status changes to Closed. The case is now read-only, and its creator can see the AI Reports, annotations and investigation results.

If you are not allowed to close the case, a red message under the button explains why.

9.8 The Comments tab

Comments (previously called Reviews) are where the people working on a case discuss it and record their conclusions. Click **Comments** on the slider or in the sidebar to open it.

The panel shows the number of comments in the corner, then the conversation itself. Your own comments appear on the right in green; other people's appear on the left in white. Each one carries the author's username, their initial in a round badge, and the date and time it was posted.

1. Type into the box at the bottom of the panel ("Write your comment here").
2. Click **Send Comment**.

To change or remove one of your own comments, click the small **Edit** button on it. In the "Edit comment" window you can change the text and click **Save changes**, or click **Delete comment** and then **Delete** to remove it permanently (click **Back** to change your mind). You cannot edit or delete other people's comments.

Note: Investigators and admins can comment at any time. USER accounts can comment on their case once it has been closed, which is when they can see the investigation's results.

If the case has no comments yet, the panel invites you to "Start the conversation below."

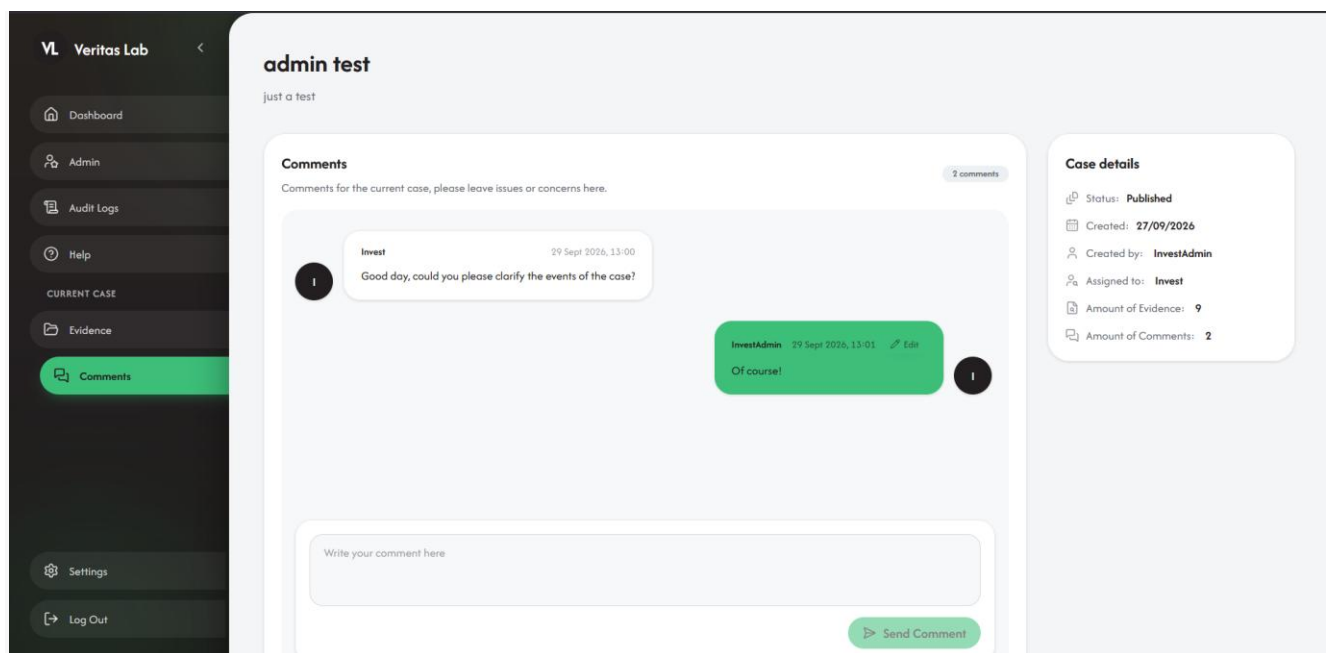

Figure 14 - The Comments tab, where the team discusses a case

9.9 The Audit Timeline tab

The Audit Timeline shows everything that has happened to the case, in order, as a winding line of events. Each event shows an icon, the date and time, what happened and who did it.

Events that are recorded include: Case Created, Case Renamed, Case Description Updated, case published and assigned, Evidence Added, Evidence Annotated, Case Closed and Case Deleted.

The timeline can be read by the case creator, the investigator assigned to the case and any admin. It is written automatically and nobody can edit it, which makes it a reliable record if a finding is ever questioned. If nothing has been recorded yet, the tab shows "No timeline data available yet."

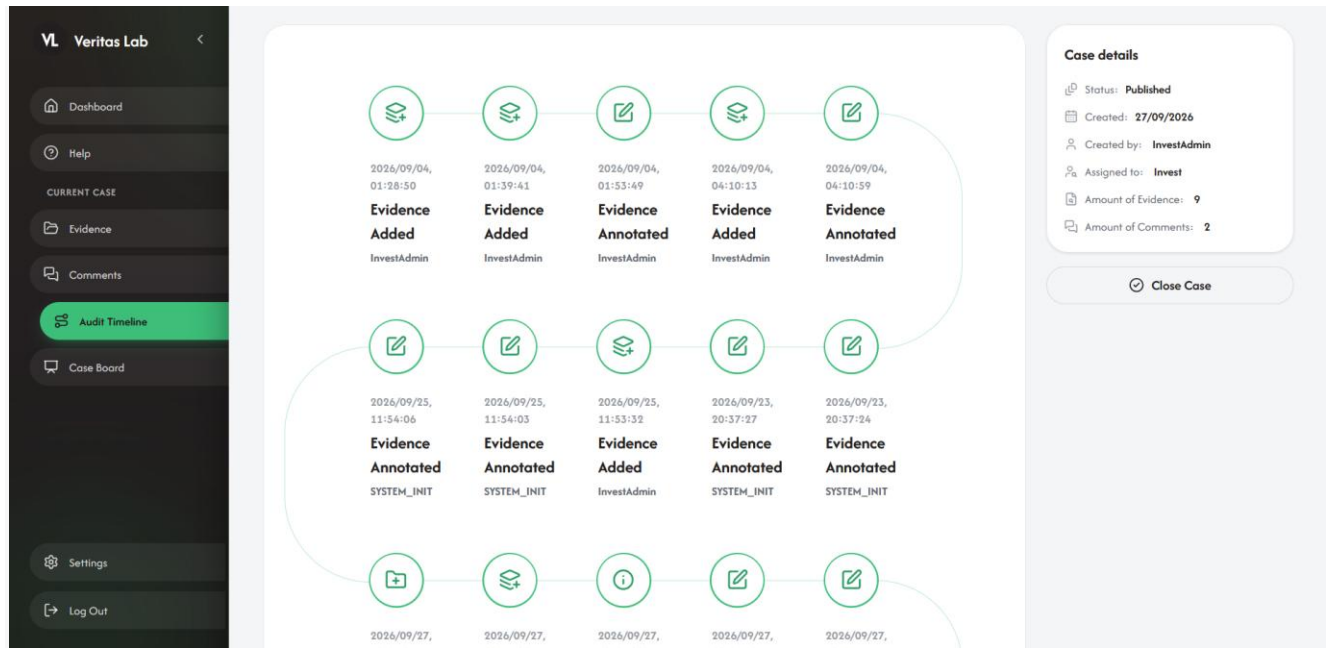

Figure 15 - The Audit Timeline for a case

9.10 Deleting a case

A case can be deleted from its card on the Dashboard with the small **X** button.

- Anyone can delete a case they created, but only while it is still open (before it has been published).
- Admins can delete any case, in any state.

A confirmation window warns that the case and all its evidence and comments will be removed permanently. Click **Delete** to confirm or **Cancel** to keep it. The deletion itself is still recorded in the audit logs.

10 The Case Board

Address: /case-page/<case id>?tab=Case Board **How to get here:** click Case Board on the case page slider or in the sidebar

The Case Board is an investigator's pin-board. It lets you lay out every piece of evidence in a case on a large canvas, draw links between items, add sticky notes and build a timeline of events, so that the story behind a claim is easy to see at a glance.

Note: Investigators and admins can view the board of any published or closed case. Only the investigator or admin assigned to the case can save changes, and only while it is published. USER accounts do not have access to Case Boards.

10.1 The layout

- **The canvas** takes up most of the page. You can drag the background to move around and scroll to zoom.
- **The side panel** on the right has two tabs: **Evidence**, which lists the case's files under "Not on board" and "On board", and **Report**, which shows the AI Report of whichever evidence item is selected on the board.
- **The toolbar** floats along the bottom of the canvas.

Each evidence card in the side panel shows a thumbnail, the file type, the time the file was captured (read from its metadata, or "No timestamp" if none was found), its risk level and how many annotations it has.

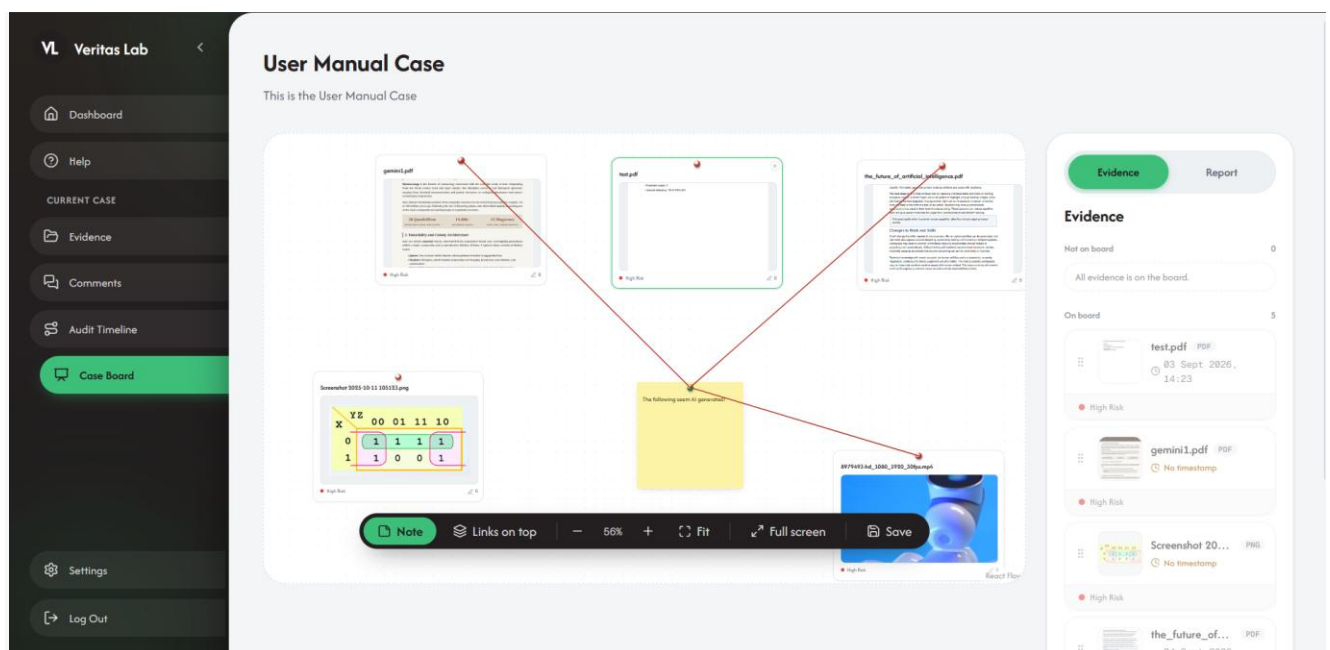

Figure 16 - The Case Board

10.2 Putting evidence on the board

There are two ways to fill the board.

DRAG AND DROP

1. In the side panel's **Evidence** tab, find the item under "Not on board".

2. Grab it by the handle (the six dots on its left edge) and drag it onto the canvas.
3. Drop it where you want it. The item moves to the "On board" list. Each file can be on the board only once.

GENERATE A TIMELINE

When the board is empty, a **Generate Case Board** button appears in the middle of the canvas. Click it and Veritas Lab places every piece of evidence that has a capture time in date order, and links each one to the next with a green line labelled with the time between them (for example "+3 hours"). This is a quick way to spot evidence that was captured out of sequence.

The button is greyed out, with the message "No evidence in this case has a captured timestamp", when none of the files carry a capture time in their metadata.

10.3 Working with evidence, notes and links

- **Move** an item by dragging it.
- **Select** an item by clicking it. It gains a green outline, and its AI Report appears in the side panel's Report tab.
- **Open** a selected evidence item in the Workbench by double-clicking it. The Workbench's Back to case link then brings you straight back to the board.
- **Remove** a selected item from the board with the small X on its corner. This only removes it from the board, not from the case.
- **Add a note** by clicking **Note** on the toolbar. A sticky note appears in the middle of the view; click it and type. Press Esc to stop typing.
- **Link two items** by dragging from the edge of one item to another. Links you draw are red; generated timeline links are green.
- **Label a link** by selecting it and clicking **Add label**, or double-clicking an existing label to edit it.
- **Cut a link** by selecting it and clicking the scissors button.

10.4 The toolbar

Button	What it does
Note	Adds a sticky note in the middle of the current view.
Links on top	Switches between drawing links above the evidence cards and behind them.
- / % / +	Zooms out, shows the current zoom level, and zooms in.
Fit	Zooms and moves the view so the whole board fits on screen.
Full screen	Expands the board to fill the window. Click Exit or press Esc to return.
Save	Saves the board. It reads Saved when there is nothing new to save, and shows "Error saving board" if the save fails.

Table 6 - Case Board toolbar

If you are the assigned investigator, any unsaved changes are also saved automatically when you leave the board or close the page.

11 The Workbench

Address: /case-page/<case id>/workbench/<evidence id> **How to get here:** click an evidence card on a case page, or double-click a selected item on the Case Board

The Workbench is where the detailed work on a single piece of evidence happens. At the top is a **Back to case** link, the file name, and a green **Show Report** button that opens the AI Report in a pop-up window from any tab.

11.1 The four tabs

A slider under the heading switches between four tabs. The Workbench always opens on the AI Report tab.

Tab	Use it to
AI Report	Read the automatic analysis of the file: risk level, AI-generated probability, findings and reasons, plus a heatmap for images.
Annotations	Mark up the file with circles, notes and highlights, and review any AI-detected annotations.
Metadata	Compare the file's hidden metadata against genuine reference examples, with suspicious fields flagged.
Plug-and-Play Models	Run your own ONNX detection model against the file and review the history of results.

Table 7 - Workbench tabs

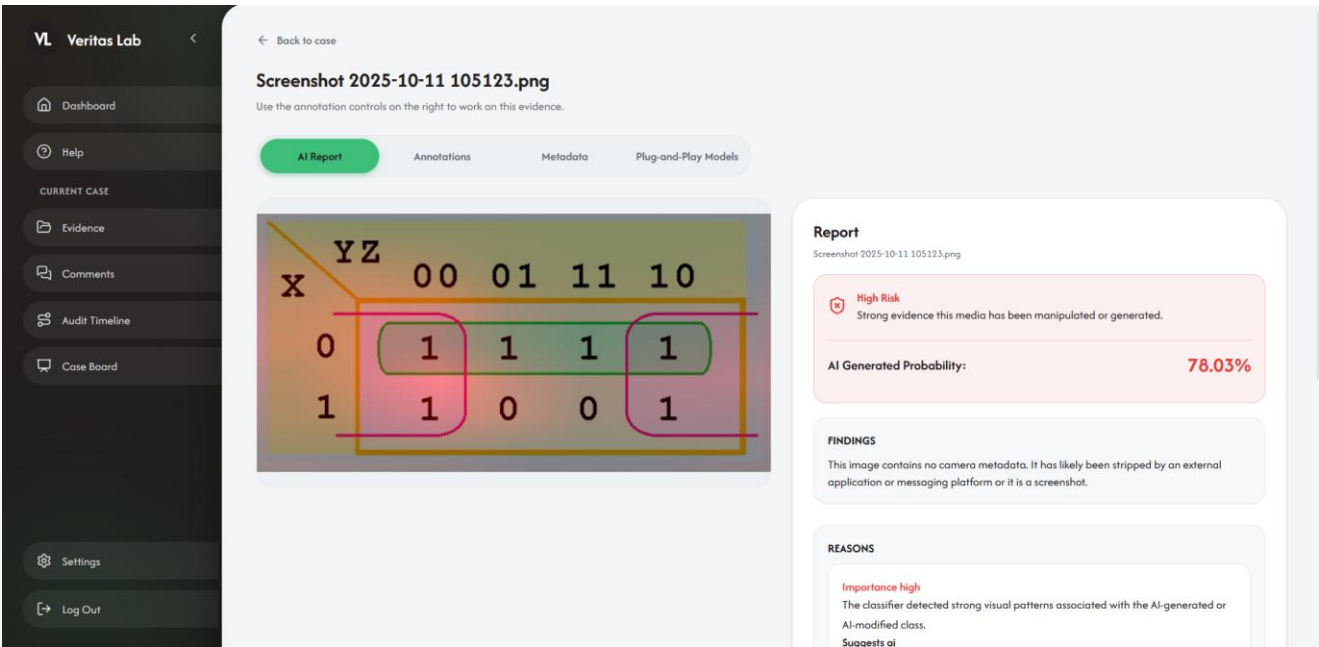

Figure 17 - The Workbench as it first opens, on the AI Report tab

11.2 Viewing the evidence

The evidence is shown large on the left:

- **Images** are shown in full.
- **PDFs** are shown page by page, with the text selectable.

- **Videos** play in a built-in player with the usual play, pause, seek and volume controls.

If the file cannot be displayed you will see a crossed-out image icon with "Preview not available for this file type" or "No media preview available yet".

11.3 The AI Report tab

Every file is analysed automatically after it is uploaded, using detection models built for its type. The report panel on the right summarises the result.

RISK LEVEL

The coloured box at the top gives the overall verdict:

Level	Colour	Meaning
Low Risk	Green	No significant signs of tampering or manipulation were found.
Medium Risk	Amber	Some signs of editing or processing were found.
High Risk	Red	Strong evidence that this media has been manipulated or generated.
Unknown	Yellow	The file type is not supported for analysis yet.
Not Analysed	Blue	The file has not been analysed yet, or you are not yet allowed to see its report.

Table 8 - Risk levels

Underneath the verdict, **AI Generated Probability** gives the model's estimate, as a percentage, that the file was generated or manipulated.

FINDINGS AND REASONS

The **Findings** box gives a plain-language summary of the result. What follows depends on the type of file:

- **Images:** a **Reasons** list, sorted with the most important first. Each reason has an importance (high, medium or low) and says whether it suggests the image is authentic or AI-generated. On the left, the image is replaced by a **heatmap**: the warmer the colour, the more that area influenced the decision.
- **PDFs:** a **Reasons** list describing what in the document's text, structure or metadata drove the result. Suspicious passages may also appear as AI-detected highlights on the Annotations tab.
- **Videos:** separate **Video AI Probability** and **Audio AI Probability** scores, the **Visual weight** and **Audio weight** used to combine them into the overall score, and a written explanation of the visual analysis.

Note: The AI Report is a guide, not a verdict. Use it to decide where to look closely, and confirm its findings with your own review, the metadata and the rest of the case.

11.4 The Annotations tab

Click **Annotations** on the slider to open the annotation tools. The **Annotation tools** panel appears on the right with a slider of tools. Only one tool is active at a time, and a short hint under the media always tells you what the current tool does.

Tool	How to use it	Available on
Select	Click an annotation to view its details.	All files
Draw	Click and drag to circle the area you want to flag.	All files
Comment	Click anywhere on the media to drop a note, type why you flagged it, then click the tick to save it (or the X to cancel).	All files
Highlight	Select a passage of text in the document with your mouse to highlight it.	PDFs only

Table 9 - Annotation tools

11.4.1 Marking up a file

1. Click **Annotations** on the slider.
2. Choose **Draw**, then click and drag across the media to draw around the area you are flagging.
3. Choose **Comment**, then click a single point and type your note.
4. For a PDF, choose **Highlight** and select the text you want to flag.
5. Every mark is added to the **Annotations** list in the panel. Drawn marks are listed as "Circled region 1", "Circled region 2" and so on; notes and highlights are listed using their text.
6. Click an item in the list to highlight it on the media. Click the small bin icon next to an item to remove just that one, or click **Clear** to remove all of your marks.
7. When you are happy, click **Save**. "Annotations saved successfully!" confirms it. If something goes wrong, a red message explains the problem.

Note: Annotations are not saved automatically. Always click Save before leaving the Workbench.

11.4.2 Annotating a video

Pause the video at the moment you want to flag, then use Draw or Comment as normal. The annotation tools only work while the video is paused. Each video annotation remembers the exact moment it was made, and shows it as a time stamp (minutes:seconds) in the Annotations list. Click an annotation in the list and the video jumps to that moment and pauses.

11.4.3 AI-detected annotations

The automatic analysis can add its own annotations, for example highlighting suspicious passages in a PDF. These are listed with a red icon and an **AI detected** badge. They cannot be removed, so the analysis always stays visible alongside your own marks. If the text an AI highlight refers to cannot be found on the page, the list says "Text not found in this document".

11.4.4 Good to know

- Your marks never change the original file. They live on a separate see-through layer above it, so the evidence stays forensically clean.
- Marks stay in the right place when you resize the window or use a different screen.
- For PDFs, each mark remembers which page it belongs to.

- Saving annotations is recorded in the case's Audit Timeline as Evidence Annotated.

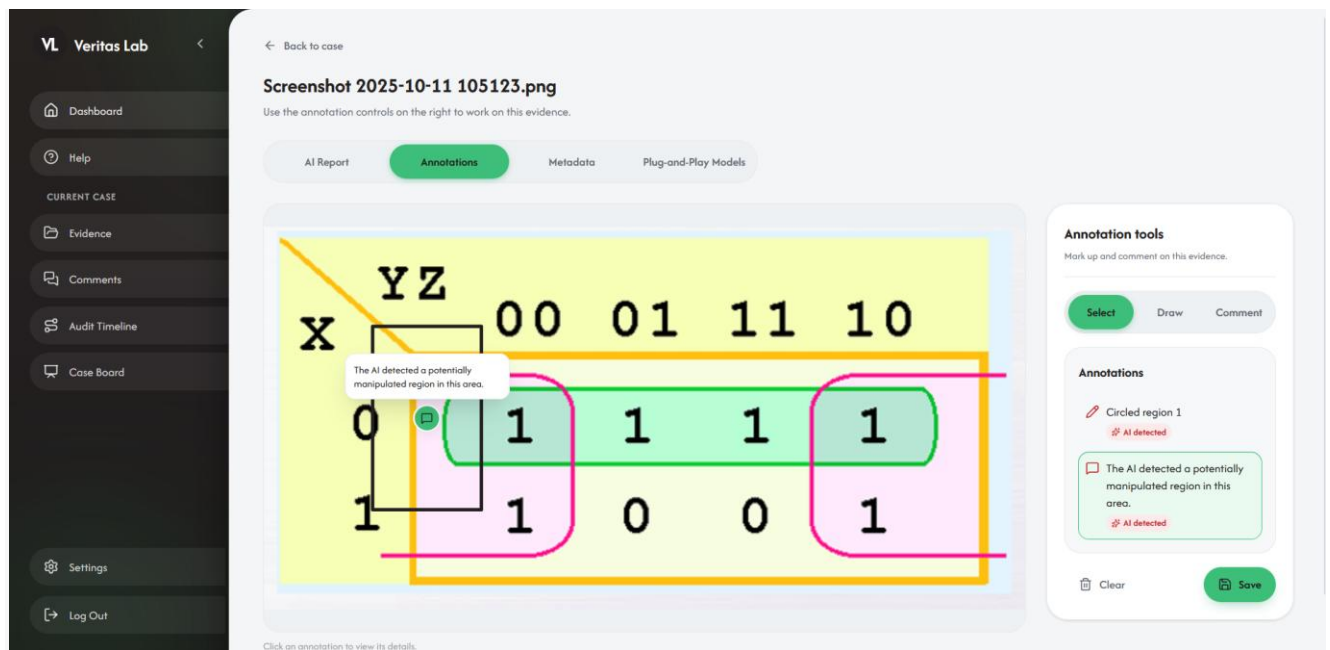

Figure 18 - An image marked up on the Annotations tab

11.5 The Metadata tab

Files carry hidden information about how and when they were made. AI generators, editing software and re-encoding all leave traces in it. The Metadata tab shows this information side by side with a genuine reference file of the same type, so that anything unusual stands out. While this tab is open, the metadata takes the place of the media preview.

THE SUMMARY

At the top, three counters summarise what was found:

- **AI indicators:** fields that point to AI generation, such as the name of a generator or a generation seed.
- **Edit / re-encode signs:** fields that suggest the file was edited or re-saved, such as editing software.
- **Provenance fields:** fields that record where the file came from, such as a content-credentials record.

Below the counters, short insight cards explain the most important findings.

THE TWO PANES

The left pane lists every field extracted from **this evidence**; the right pane lists the fields of a **reference example**, a genuine file of the same type. Click **Swap example** to compare against a different reference. Flagged fields are tinted and tagged AI, Edits or Provenance, with the reason written underneath. Long lists show the first 80 fields; click **Show more fields** to see the rest.

FILTERING

- **Filter box:** type a key or value, for example "Software", "JUMBF" or "Seed". Matching text is highlighted in both panes.
- **All groups** dropdown: show only one group of metadata.
- **All / Flagged / AI / Edits / Provenance:** show everything, only flagged fields, or only one kind of flag.

- **Flagged first:** sort flagged fields to the top (on by default).
- **Hide empty:** hide fields that have no value.

If the file type is not supported, the tab says "Metadata comparison isn't available for this file type."

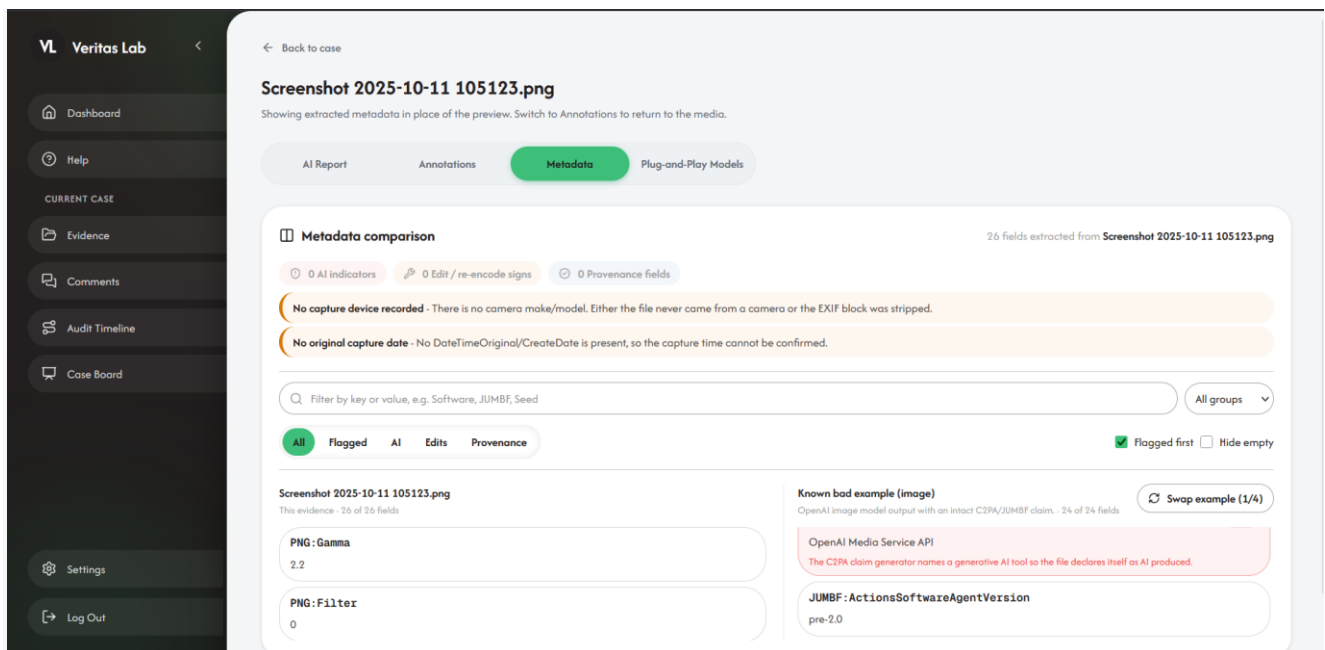

Figure 19 - Comparing an image's metadata with a reference example

11.6 The Plug-and-Play Models tab

Plug-and-Play Models lets an investigator bring their own AI detection model and run it on the evidence, for a second opinion alongside the built-in analysis. Models must be in ONNX format (a file ending in .onnx) and must classify media as authentic or AI-generated.

The model runs inside your web browser, so the model file itself is never uploaded to Veritas Lab. Only the result is saved to the case.

11.6.1 Running a model

1. Click **Plug-and-Play Models** on the slider.
2. Click the upload box and choose your .onnx file. The box confirms "File selected" and shows the file's name and size. Click the X to choose a different file.
3. If your model needs different settings, open **Advanced Model Config Options** (see the table below). Most image models work with the defaults.
4. Click **Run Model**. The button reads "Running..." while the model works. Large models or videos can take a little while.
5. When it finishes, "Model ran successfully!" appears and the result is shown in the **Plug and Play Report** beside the form.

Setting	Default	What it controls
Activation Function	Sigmoid	How the model's raw output is turned into a probability: Sigmoid, Softmax or None (if the model already outputs a probability).
Input Width / Input Height	224 x 224	The image size, in pixels, that the model expects. Each image, page or frame is resized to this.
Frame Count (videos only)	8	How many frames are sampled from the video and scored.
Page Count (PDFs only)	4	How many pages of the document are rendered and scored.

Table 10 - Advanced model configuration

11.6.2 Reading the Plug and Play Report

The report shows the risk level, the model's verdict (authentic or AI) and its probability, and a sentence summarising the result. The risk level is worked out from the probability:

- **High Risk:** probability of 80% or more.
- **Medium Risk:** probability from 60% up to 80%.
- **Low Risk:** probability below 60%.

Under **Model Configuration** you can see the settings the model was run with; click **Show Raw Config** to see them in full. Every run is kept: use the left and right arrows at the top of the report to step through earlier runs on the same file, newest first.

Note: Results are saved to the case only if you are the investigator or admin assigned to it. If you are not, the model still runs, but a message tells you the result could not be saved.

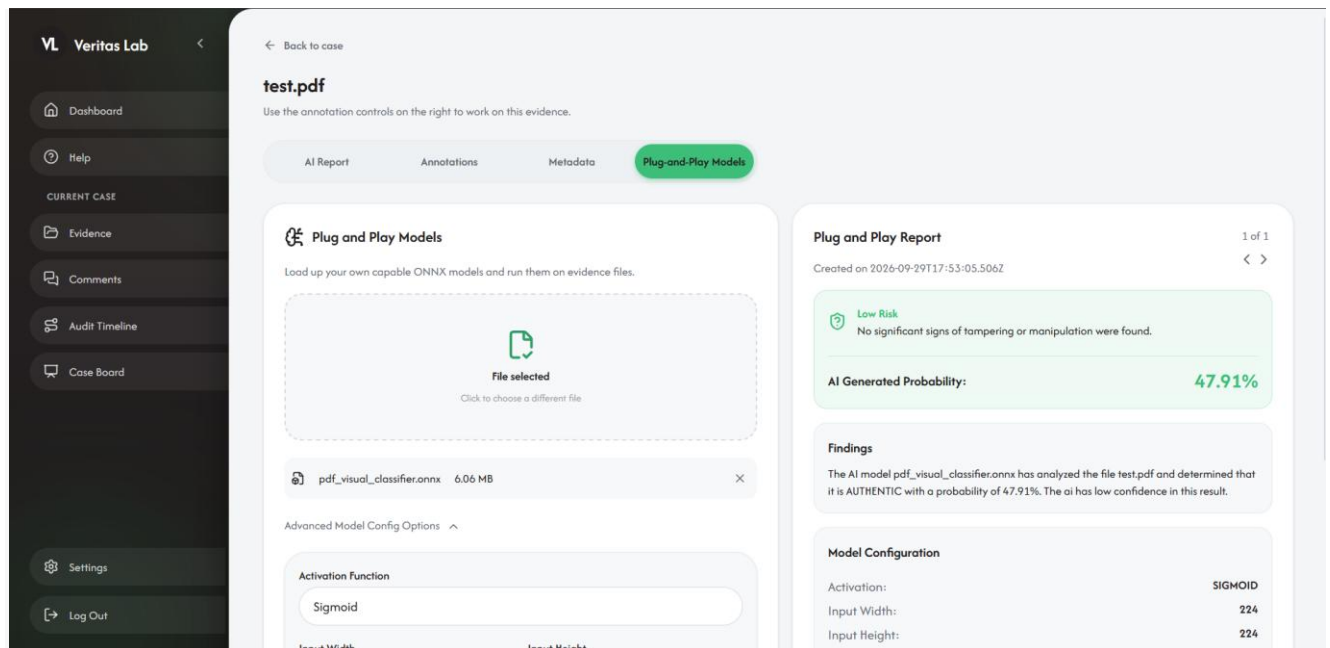

Figure 20 - Running your own model on a piece of evidence

12 The Admin page

Address: /admin **Sidebar:** Admin (administrators only)

This page is only for administrators. If your account is not an administrator, the Admin link does not appear in your sidebar, and typing the address directly simply sends you back to the Dashboard.

12.1 Finding a user

The top bar of the Admin page lets you:

- **Search users:** type a name to narrow the list down.
- **Role filter:** choose All, ADMIN, INVESTIGATOR or USER to show only accounts with that role.
- **Sort dropdown:** order the list by User Name, Username, User ID or Role.

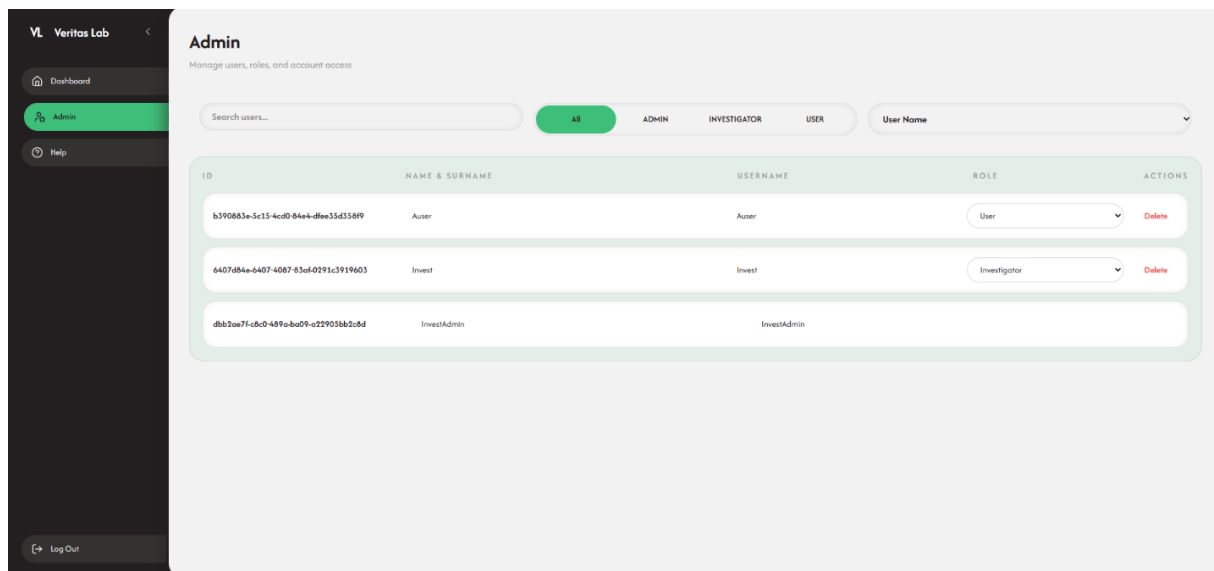

Figure 21 - The Admin page for managing user accounts

12.2 Each user card

Every account appears on its own row showing, from left to right: the user ID, their display name, their username, a dropdown to change their role, and a red **Delete** button.

Your own row is marked **You**. It shows your role as a badge instead of a dropdown and has no Delete button, so you cannot accidentally change your own role or remove your own account.

12.2.1 Changing someone's role

1. Find the person in the list.
2. Open the dropdown on their row and choose Admin, Investigator or User.
3. The change is applied immediately. The controls are briefly disabled while it saves.

12.2.2 Removing an account

1. Click the red **Delete** button on that person's row.
2. A confirmation box appears naming the account so you can double-check you have the right one.
3. Confirm to remove the account, or close the box to cancel.

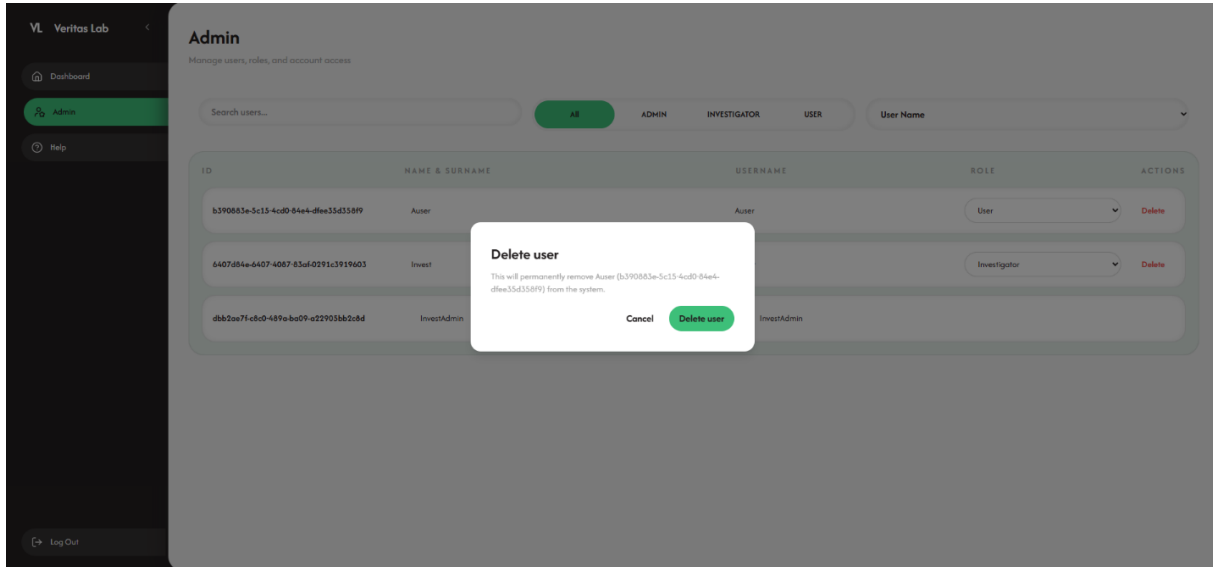

Figure 22 - The confirmation shown before an account is removed

If something goes wrong, a red message appears below the list explaining what failed. If no accounts match your search you will see "No users found."

13 The Audit Logs page

Address: /audit-log **Sidebar:** Audit Logs (administrators only)

The Audit Logs page gives administrators an overview of recorded activity across the whole platform. Non-administrators who open the address are sent back to the Dashboard.

Every case that has at least one audit entry is listed by name. Click a case to expand it and see:

- **Case ID:** the unique identifier of the case.
- **Case Name:** its current (or last known) name.
- **Events:** how many audit events have been recorded for it.
- **Last Event:** when the most recent event happened.
- **Exists:** whether the case still exists ("true") or has since been deleted ("false"). Deleted cases stay in the audit log so that their history is never lost.

For the full, step-by-step history of a particular case, open the case and use its Audit Timeline tab.

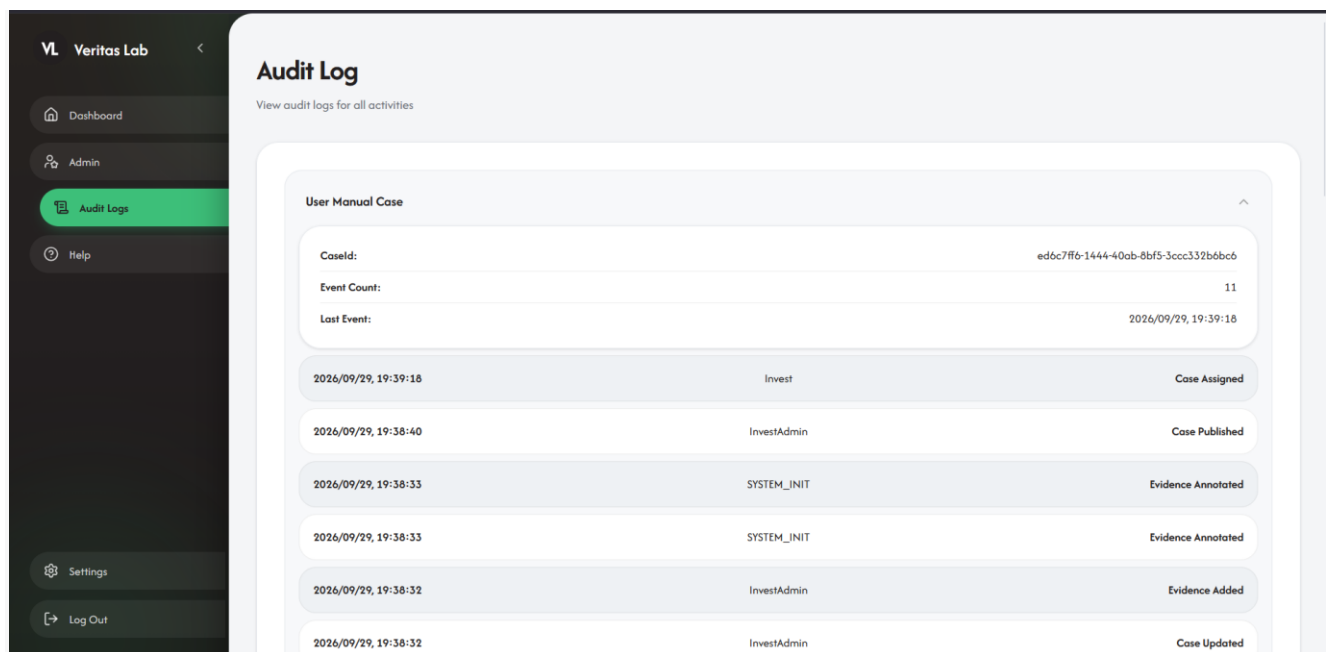

Figure 23 - The Audit Logs page

14 The Help page

Address: /help **Sidebar:** Help

The Help page is a built-in reference you can reach from anywhere. It holds tutorials, guides and answers for working with Veritas Lab.

14.1 Searching

A wide search box sits under the heading. Type a word, for example "annotation" or "password", and every section is filtered at once. A small number on each tab tells you how many matches it holds, so you can see immediately where the answer lives.

If nothing matches, the page says "No results for ..." and suggests trying another term or another section.

14.2 The three sections

- **Tutorials:** step-by-step walkthroughs, such as creating your first case, uploading evidence, annotating in the Workbench, finding and organising cases, discussing a case and managing users. Click a tutorial to expand it.
- **Guides & Docs:** background on what Veritas Lab does, how a case is structured, the annotation model, roles and permissions, accounts and passwords, and supported file formats.
- **FAQs:** short answers to common questions.

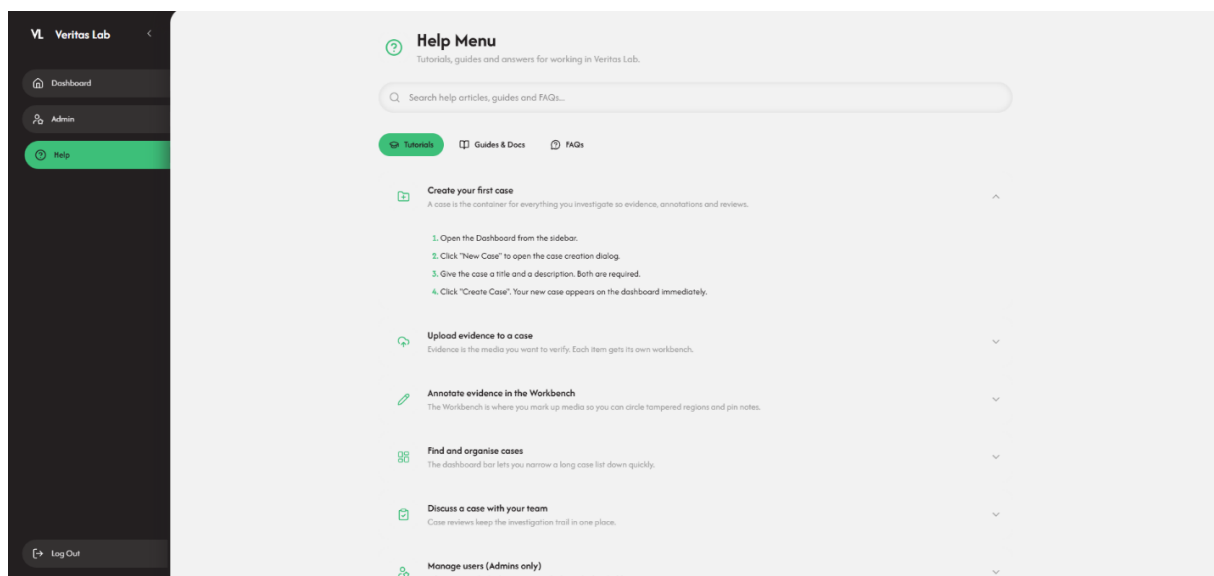

Figure 24 - The Help page showing an expanded tutorial

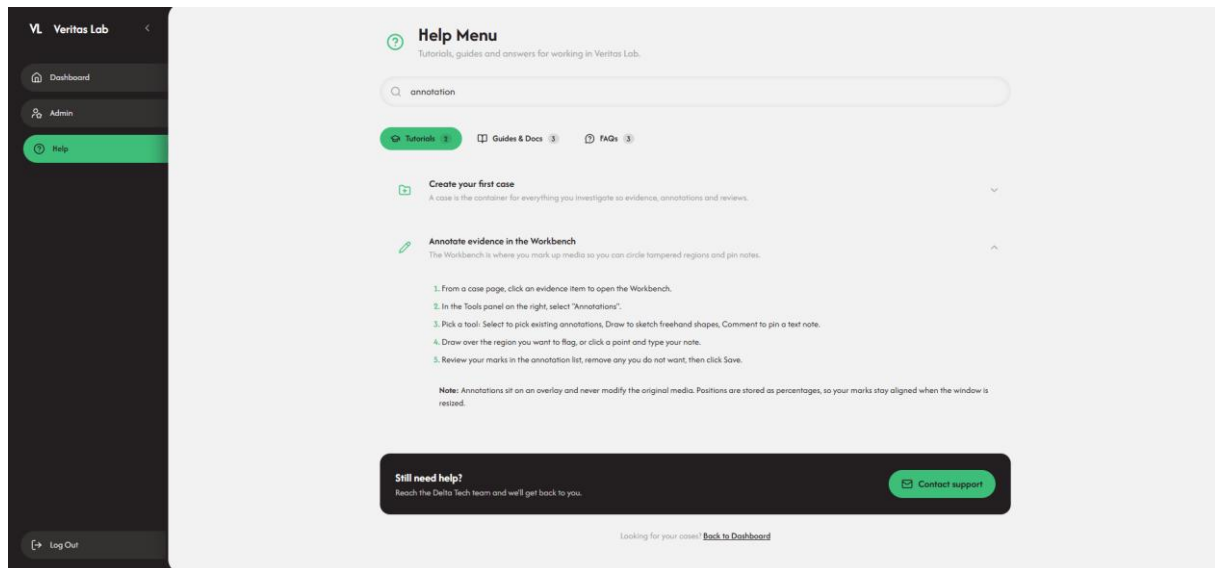

Figure 25 - Searching the help content

14.3 Still stuck

At the bottom of the page, a panel headed "Still need help?" contains a **Contact support** button. Clicking it opens a new email to the DeltaTech team at support.deltatech@gmail.com.

Below that, a **Back to Dashboard** link returns you to your cases.
